

How To Guide Running Your First Scan

This guide presents the steps required to run your first cyber vulnerability scan using the Insight portal at <https://insight.silversky.com>

1. Access the Scan Surface menu The menu is accessible from the options displayed on the left side of the screen.

2. Choose between Agentless Surface scanning and Agentbased Surface scanning. Agentless scanning does not require the need to install any software on the target, while Agentbased scanning requires the installation of an agent on the target.

First Scan

- II. Agent-based Surface scanning involves detecting cyber vulnerabilities in your infrastructure by installing a software program. It is more resource-intensive but also more accurate.

First Scan
